DESCRIPTION:

Thanks to their composition based on natural active ingredients, PARASITAL® Pipettes for Big Dogs are effective against external parasites. They are effective for the prevention of infestations of fleas and ticks and act as a repellent against the mosquito that transmits Leishmaniosis.

INDICATIONS:

The PARASITAL® antiparasitic pipettes for big dogs are suitable for preventing the discomfort caused by insects and mites, such common parasites in the life of our pets. They can be used to fend off attacks by fleas, ticks, flies and mosquitoes.

PARASITAL® Pipettes for Big Dogs have high repellent power and endurance, looking after your pets with no chemical ingredients. Independent approved laboratories guarantee the effectiveness and endurance of the active ingredients.

Experimental studies have also demonstrated their repellent effectiveness against Phlebotomus mosquitoes, which transmit Leishmaniosis.

MODE OF USE:

Apply the content of the pipette to the area joining the neck and the back, and the base of the tail, lifting up the animal's hair so that the liquid enters into contact with the skin.

Apply at least once per month to guarantee continuous protection. In areas where insects are a seasonal problem, it is advisable to apply the product more frequently, if necessary. It is advisable to apply it 3 or 4 weeks before the onset of insect activity.

- Water resistance: the antiparasitic pipettes for big dogs continue to protect the dog if it comes into contact with water. If dry shampoo has been applied or the animal has been bathed, the pipette should be re-applied once the animal is clean and dry.

- At home: the PARASITAL® antiparasitic pipettes for big dogs will protect your animal from new fleas, ticks or mosquitoes, but they will not eliminate an existing infestation. If your dog has fleas or ticks, or if they are present in your home or the animal's enclosure, appropriate treatment must first be applied.
