ANTIPARASITIC MEDIUM SIZED DOGS

ACTIVE AGAINST

PHLEBOTOMUS
TRANSMITTER MOSQUITO

LEISHMANIASIS

REPELLENTS
100%
NATURAL

PARASITAL® Pipettes for medium sized dogs from 10-25 kg. Use on non-infested animals, by applying the content of the necessary number of pipettes to the area joining the neck and the back, and the base of the tail, lifting up the animal's hair so that the liquid enters into contact with the skin.

They have tried and tested effectiveness against the Phlebotomus mosquito, which transmits Leishmaniosis in dogs. Apply once per month.

DESCRIPTION:

Thanks to their composition based on natural active ingredients, PARASITAL® Pipettes for medium sized dogs 10-25 kg are effective against the eternal enemies of our pets: external parasites. Ticks, fleas, flies and even the mosquito that transmits leishmaniosis, will no longer be a problem, providing well-being and peace of mind to pets and owners alike.

INDICATIONS:

The products that are part of the PARASITAL® range are suitable for preventing the discomfort caused by external parasites.

With high repellent power and endurance, the PARASITAL® range looks after animals in a natural fashion, providing your dog with comfort and well-being and making its life easier. Independent approved laboratories guarantee the effectiveness and endurance of the active ingredients.

Experimental studies have also demonstrated their repellent effectiveness against Phlebotomus mosquitoes, which transmit Leishmaniosis. PARASITAL® Pipettes for medium sized dogs from 10-25 kg are also an effective repellent to fend off attacks by fleas, ticks, flies and mosquitoes.

MODE OF USE:

Use on non-infested dogs, by applying the content of the pipette to the area joining the neck and the back, and the base of the tail. Lift up the animal's hair so that the content of the pipette enters into contact with the skin.

Apply once per month for continuous protection. In areas or at times of the year with a large number of insects, it is advisable to apply the product 3 or 4 weeks before the onset of insect activity.

- Water resistance: the PARASITAL® repellent pipettes for medium sized dogs continue to protect dogs when they come into contact with water. If dry shampoo has been applied or the animal has been bathed, the product should be re-applied once the animal is clean and dry.

- At home: the PARASITAL® repellent pipettes for medium sized dogs will protect your dog from new fleas, ticks or mosquitoes, but they will not eliminate an existing infestation. If your dog has parasites, or if they are present in your home, an appropriate treatment must be applied before using the pipettes.
